COUNTERMEASURES TRAINING

Comprehensive TSCM Training Courses

TSCM Training courses cover both theory and practice of electronic and physical countermeasures searches.

Course 1:

2 days covering the following:

- Assessing the Threat
- Evaluation of Electronic Eavesdropping Devices
- What is and what is not possible
- Adopting an attitude
- Core Equipment
- Practical Instruction on Equipment
- Practical Instruction on Techniques
- Practical Search
- The Report
- Evaluation

Course 2:

3 days covering all the above and:

- Additional Practical Search
- After Search Program

All courses are supported via bound notes.

Swiss or Home Based Training.

The courses are designed to give the attendees a broad and up to date introduction into TSCM searches, and provide a practical 'hands on' experience as to what is involved on an actual TSCM search. Attendees will be instructed on search techniques in order for them to assess the threat and deal with the search via dedicated equipment and techniques.

THE TRAINING COURSE IS NOT AN EQUIPMENT SALES SEMINAR!

The equipment shown and used on the training course will come from a wide range of manufacturers and will form a working tool kit of essential equipment.
